HEMOGLOBIN A1c FINAL

Lab: UL

HEMOGLOBIN A1c (4548-4) FINAL

Reference Range: <5.7 % of total Hgb

6.4

<5.7

No Historical Data

```
For someone without known diabetes, a hemoglobin
A1c value between 5.7% and 6.4% is consistent with
prediabetes and should be confirmed with a
follow-up test.

For someone with known diabetes, a value <7%
indicates that their diabetes is well controlled. A1c
targets should be individualized based on duration of
diabetes, age, comorbid conditions, and other
considerations.

This assay result is consistent with an increased risk
of diabetes.

Currently, no consensus exists regarding use of
hemoglobin A1c for diagnosis of diabetes for children.
```

32.0 36.0

No Historical Data

FINAL

```
For adults, a slight decrease in the calculated MCHC
value (in the range of 30 to 32 g/dL) is most likely
not clinically significant; however, it should be
interpreted with caution in correlation with other
red cell parameters and the patient's clinical
condition.
